Subject: CRIBIS recognizes the maximum economic-commercial reliability to Resitape

CRIBIS, a company specialized in the supplying of business information on Italian and foreign companies, has awarded Resitape the CRIBIS Prime Company recognition, attributing it the highest level of reliability as a counterparty to a B2B commercial transaction.

This awarding represents the recognition of the maximum commercial reliability. This recognition is based on Cribis rating, a dynamic and constantly updated indicator of the reliability of a company

The CRIBIS Prime Company is a recognition of great value given that every year it is awarded only to 7% of the over 6 million Italian companies. CRIBIS attributes this recognition using the CRIBIS D&B Rating, a synthetic indicator which, based on a statistical algorithm, measures the probability that a company generates serious commercial defaults. Numerous variables are used for the calculation, including personal information, indexes and balance sheet data, company seniority, payment experiences, presence of negative information.

The CRIBIS Prime Company recognition is therefore the highest level of evaluation of the commercial reliability of an organization and is issued only and exclusively to companies that constantly maintain a high economic-commercial reliability and are virtuous in payments to suppliers.

This important acknowledgment is the confirmation of the level of economic-commercial solidity of Resitape and a guarantee for all the companies that have chosen Resitape as a commercial partner
